Lahore, Pakistan | +92 336 4024700 | abdullahnaseer02@outlook.com | LinkedIn | GitHub | Portfolio

## Summary

Software Engineer with hands-on experience building full-stack applications and automation systems, from research prototypes to production. Skilled at breaking down complex requirements and integrating APIs, databases, and third-party services into reliable, real-world workflows.

## Experience

### Web7Labs

July 2026 – Present

*Associate Software Engineer*

*On-site, Lahore*

- Own the full-stack codebase (Next.js, Express, PostgreSQL, Prisma) for a production Wealthtech platform, architecting its core ledger, transaction-safety, and access-control systems.
- Train and mentor engineering interns end-to-end on generative AI and LLM-powered chatbot development, alongside conducting performance reviews.
- Partner directly with the founder to scope and ship features spanning investor, vendor, and admin workflows from requirements to production.

### Scale Social AI

May 2026 – July 2026

*AI Automation Engineer (Freelance Contract)*

*Remote*

- Automated end-to-end social media workflows for a YC-funded startup using n8n, reducing manual content-review time.
- Cut average content-approval turnaround from several hours to under 5 minutes by engineering a novel WhatsApp-based approval system adopted for 100% of client content sign-off.
- Unified 5+ third-party services (Twilio, Meta, WhatsApp Business API, Slack API, Instagram/Google OAuth) into a single automation pipeline, eliminating manual handoffs between messaging and social platforms.

## Education

### COMSATS University, Lahore

2022 – 2026

*Bachelor in Software Engineering – CGPA: 3.12*

## Skills

- **Languages:** Python, JavaScript, TypeScript, Java
- **Frontend:** React, Next.js
- **Backend:** Node.js, Express, GraphQL, PostgreSQL, MongoDB, Prisma
- **Machine Learning:** PyTorch, Transformers, LangChain, LangGraph, OpenRouter, Vector DBs, Supervised Training Pipelines
- **Tools & DevOps:** Git, GitHub, Docker, Kubernetes, CI/CD

## Projects

### MAVISE - Multimodal Audio-Visual Speech Enhancement

*Tech Stack: Python, PyTorch, CNNs, BiLSTMs, Transformer Encoder*

- Won 1st Position in the Final Year Project (FYP) Competition at COMSATS University, Lahore.
- Architected a multimodal CNN + BiLSTM + cross-attention Transformer model with an automated noise-augmentation pipeline, improving speech intelligibility (STOI) from 0.35 to 0.80 and speech quality (PESQ) from 1.1 to 2.6 over noisy baseline input.
- Delivered the project end-to-end as part of a 3-person research team, owning architecture design, model training, and evaluation against standard speech intelligibility benchmarks.

### Scale Socials WhatsApp Bot

*Tech Stack: n8n, Twilio, Firebase, WhatsApp Business API, Google and Instagram Graph API*

- Built a webhook-driven Firestore workflow with a WhatsApp message router that parses approve/reject/channel/boost replies, replacing manual database and spreadsheet edits for content teams.
- Automated social media posting into a fully automated publishing pipeline using the Google and Instagram Graph APIs, enabling direct approval-to-publish workflows.
- Implemented automated alerting to notify the marketing team of content status changes and campaign milestones in real time.

### Grownance

*Tech Stack: React (Next.js), Node.js/Express, PostgreSQL, Prisma, Redis, LangChain, LangGraph, OpenRouter*

- Built a fractional investment platform for an initial launch base of 400 users, letting investors co-own vendor-listed assets with wallets, share purchases, and profit payouts handled end to end.
- Eliminated overselling when multiple investors buy the same asset at once by running purchases in Serializable transactions over an append-only ledger.
- Sped up payout and notification APIs with Redis caching, and added JWT refresh-token rotation so a leaked token stops working once it's reused.
